

Independent Fork Positioners

Independent Fork Positioners - A fork positioner is a tool made out of high quality materials intended to endure the most demanding procedures and work environments. This particular piece of equipment could enable the one driving to be able to maneuver the blades hydraulically without leaving the seat. Side shifting units have the added ability to laterally position the arms or the entire load so as to facilitate much more accurate lifting and placement in a quicker and more effective way.

The fork pocket is quite unique and can enable the individual operating it to securely sway the forks into position without any fear of destroying the positioning cylinders. This could allow the operator the choice to be able to perform simultaneous or independent fork movement, depending on the job requirement. For most lift trucks with non-OEM carriages, complete carriages are considered necessary. Standard OEM carriages can be transformed into fork positioners on available units.
