

Carriage Rollers

Carriage Rollers - Carriage rollers are specifically designed bearings that are utilized on lift masts so as to help them operate in challenging environmental surroundings. Lift masts are frequently subjected to oscillations, shocks, high dynamic and vibrations and static loads. This apparatus is frequently exposed to environmental influences like cold, heat, dust, aggressive ambient air, moisture and contamination. Hence, the lift masts' guidance arrangements need to be particularly strong and have a specific high load carrying capability.

Carriage rollers have been developed as the solution for working in different environmental conditions. These bearings are the solution where the guidance arrangements of the lift masts have to be cost-effective and maintain operational security while having the capability to handle a particularly high load carrying capacity.
