

Fork Positioner for Forklifts

Forklift Fork Positioner - A fork positioner is a device made out of top quality materials intended to withstand the most challenging procedures and work environments. This particular piece of equipment enables the one driving to be able to work the blades hydraulically without leaving the seat. Side shifting models have the extra ability to be able to laterally position the entire load or the arms in order to facilitate much more accurate carrying and position in a quicker and more efficient method.

The blade pocket is somewhat unique and could enable the operator to securely swing the blades into position without any fear of destroying the positioning cylinders. This can allow the driver the option to execute independent or simultaneous fork movement, dependent upon the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are necessary. Standard OEM carriages can be transformed into fork positioners on existing units.
